Hi all,

I thought I would compile links I found helpful in completing level 9, most notably for Groups C, E, and F.

I found recurrent questions being asked, and recurrent answers being given. This is not a final answer on "how to complete C, E, and F effortlessly", but more guidance to help you in the process of discovery. I could give you a compendium of all the steps I eventually undertook, but this would trump the

And of cuss use Visual Studio, not VS Code, mayb TA can put on top of front page.

@APalley

Good work Marcus.

No more VS Code from now on... 🙄

I have to admit, I previously disliked VS Code entirely, but I've recently found it to be a really good IDE when it comes to writing multi-language systems (i.e., Python with C++) and writing code remotely (i.e., on an AWS EC2). However, VS is still the better overall IDE for pure C++ development.

Yeah, I was just attracted by its seeming simplicity, given my non-CS oriented background. I knew from the get-go that this entire journey would involved a lot of fidgeting around. Not the most enjoyable, as I would prefer to get to the coding part, but it is what it is!

🔗 📌 #7

Hi and Thank you for your link!  
I would like to ask is this link:

**On using only one project and deleting the others / Enabling one 'main' and disabling other files:**

<https://quantnet.com/threads/not-able-to-open-mc-sln.51333/page-2>

the right link that you want to share? Because I was reading through it and felt that it didnt say anything about enabling/disabling other files, kind of curious about that.

Thank you for your time

@Jiamin Li

Try these:

~~1) <https://quantnet.com/threads/include-utilities-djd.50610/#post-300465>~~  
~~2) <https://quantnet.com/threads/question-regarding-excel.48312/page-2#post-307041>~~

1) <https://quantnet.com/threads/what-does-it-mean-to-enable-the-main.49387/#post-294292>

I think I mixed things up, because the thread I pasted talked specifically about how to use one project, and discard the others.

And if you have any other helpful links you have come across, do share them, and I'll add them to the list. Just explain why it was helpful.
